WHAT MATTERS TO HIM NOW

High graduate employability

Flexible learning pathways

Industry practitioners

Collaborative culture

BIO

Lives: With parents in Tampines; ~50 min commute to the city campus

Year 3: Exchange semester in Europe; 10-week summer internship as a data analyst intern at a local bank (no return offer)

Year 4 load: Capstone project with an industry sponsor + 3 modules per term + full-time job search

Aims for: Data analyst or associate product manager role

QUOTE

I've done everything SCIS told me to do: the internship, the exchange, the projects. Now I just need it to pay off.

PERSONALITY

- Plans in spreadsheets and tracks every application, but gets anxious when anything is outside his control.
- Values efficiency: he wants answers in one place, not acrossfive portals
- Trusts seniors' advice on Telegram more than officialannouncements
- Under pressure, he puts job interviews

GOALS

- Sign a full-time offer before Term 2 ends, ideally in productor analytics
- Graduate on time with no surprises in the degree audit
- Finish a capstone he can show in interviews and on hisportfolio

NEEDS

- A confirmed graduation audit by Week 3 of his final Term 1
- A guaranteed seat in any module he still needs to graduate
- A published process to reschedule an assessment for a jobinterview, answered within 48 hours
- Introductions to at least 3 product or analytics employersthrough SCIS

PAIN POINTS

- Final-round interviews clash with graded class presentations, with no clear rule on whether he can be excused
- Graduation requirements are spread across several portals, so he has to check them himself
- Career fair is mostly banks and consulting firms; few product roles
- Advisor emails take about a week to get a reply during peak periods
